## Adding and Subtracting Fractions- Word Problems

Solving word problems that ask you to add or subtract fractions is done the same way as adding or subtracting fractions in regular math problems.

- When adding fractions, you need to find a common denominator.
- When adding or subtracting fractions with the same denominator, keep the denominator the same and add or subtract the numerator.

**Example:** Josh ate  $\frac{1}{2}$  of a pizza last night for dinner. How much of the pizza is left? A whole pizza would be  $\frac{2}{2}$  if he ate  $\frac{1}{2}$  of it and we need to find how much is left, we need to subtract.

$$\frac{2}{2} - \frac{1}{2} = \frac{1}{2}$$

$\frac{1}{2}$  of the pizza is left.

**Instructions:** Solve each word problem below by adding or subtracting.

- Kamrenid  $\frac{1}{2}$  of the way through the book she is reading. If Kamrenid, she wants to be  $\frac{3}{4}$  of the way through the book, how much more of the book does she need to read by Friday?
- At her last birthday, Lily had grown  $\frac{1}{4}$  of an inch since last year. If the growth wasn't  $\frac{1}{4}$  of an inch this year, how much will she have grown in the past two years?
- John, James and Cole and I can lift 3 into 15 equal disks. The girls can lift 2 disks, John can lift 2 disks. What fraction of the disks have been eaten?
- Austin needs to take  $\frac{1}{2}$  of a mile to his friend's house, then, look the same route back home. How far did he travel all together?
- In a bag of candy, there are equal amounts of candy in each of its colors: red, blue, yellow, orange, green, and purple. What fraction of the candy is red or green?
